

# Garden Management

## HAVE A PLAN

In your growing space consider your plan. This can be a one year plan, 2 year, 5 year, even up to 10 year plan depending on your space. We often think of growing in a season at a time, but it is important to think about the long term intention in order to make decisions that support our soil health.

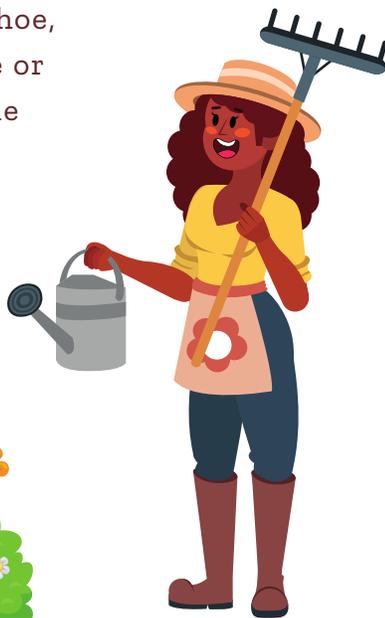

## BE ADAPTABLE

While it is important to have a plan, we must also be willing to witness what is going on in our micro ecosystem in order to adapt our process. Even the best plans need tending to on a long term scale.

## GARDEN TOOLS

There are a variety of tools that can be helpful to grow your garden. A few that could be helpful are a shovel, hoe, rake, bucket or wheel barrow, hose or watering can. For a more affordable option seek out used tools at yard sales or online.

## TRACKING

Tracking your varieties, planting dates, harvest dates, and harvest amounts can support the overall vision of the growing operation. This also helps to support future seasons of growing and your end of season reflection.

## REFLECTION

Take time at the end of the season as winter sets in to reflect on your growth this past year. Look through your records and note what worked, what didn't work, and what you might change for next year.
